News, Profiles, Stocks and More about this company

Issued/Filed Dates: **Oct. 3, 1995 / March 15, 1994**

Application Number: **JP1994000044462**

IPC Class: **A61B 1/04; A61B 1/00; A61B 10/00;**

Abstract: **Purpose:** To achieve an efficient and accurate fluorescence diagnosis regardless of parts and condition of an organic tissue with a simple construction.
Constitution: In normal observation, a normal observation image obtained with an endoscope 1 by white light from a lamp 3a of a normal illumination light source 3 is taken with a normal TV camera 6 through a second adaptor 5. In the observation of fluorescence, the quantity of the reflected light of excitation light from a laser unit 4 for fluorescence is monitored with a reflected light monitor 27 to detect the excitation light λ_0 at the wavelength of the least quantity of light and a control signal is transmitted to the laser unit 4 for fluorescence so that the excitation light λ_0 of the wavelength detected with the laser unit 4 for fluorescence is oscillated to take a fluorescent image obtained with the endoscope 1 at the excitation light λ_0 with a fluorescent image photographing camera 7 through the second adaptor 5. Then, the ratio of fluorescence at the wavelength λ_1 to that at λ_2 is determined with a fluorescent image processor 9 to distinguish lesion from the normal tissue.
